

CS313: Lab Assignment 2

B Siddharth Prabhu

200010003@iitdh.ac.in

28 August 2022

1 Answer to Question 1: Integrity Constraint Tabulation

The below table contains all integrity constraints of the tables within the university schema at <https://www.db-book.com/university-lab-dir/sqljs.html>. Note that `VARCHAR(n)` refers to a variable-length *character* string that has a maximum length of n. `NUMERIC(n,m)` refers to a *fixed point number* with user-specified precision of n digits, with m digits to the right of decimal point.

Table	Primary Key (PK)	Domain of PK	Foreign Key (Referencing Table)	Not Null
classroom	building	VARCHAR(15)	-	-
	room_number	VARCHAR(7)		
department	dept_name	VARCHAR(20)	-	-
course	course_id	VARCHAR(8)	(dept_name) references department	-
section	course_id	VARCHAR(8)	(course_id) references course, (building, room_number) references classroom	-
	sec_id	VARCHAR(8)		
	semester	VARCHAR(6)		
	year	NUMERIC(4,0)		
instructor	ID	VARCHAR(5)	(dept_name) references department	name
teaches	ID	VARCHAR(5)	(course_id, sec_id, semester, year) references section, (ID) references instructor	-
	course_id	VARCHAR(8)		
	sec_id	VARCHAR(8)		
	semester	VARCHAR(6)		
	year	NUMERIC(4,0)		
student	ID	VARCHAR(5)	(dept_name) references department	name
takes	ID	VARCHAR(5)	(course_id, sec_id, semester, year) references section, (ID) references student	-
	course_id	VARCHAR(8)		
	sec_id	VARCHAR(8)		
	semester	VARCHAR(6)		
	year	NUMERIC(4,0)		
advisor	s_ID	VARCHAR(5)	(i_ID) references instructor (ID), (s_ID) references student (ID)	-
time_slot	time_slot_id	VARCHAR(4)	-	-
	day	VARCHAR(1)		
	start_hr	NUMERIC(2)		
	start_min	NUMERIC(2)		
prereq	course_req	VARCHAR(8)	(course_id) references course, (prereq_id) references course	-
	prereq_id	VARCHAR(8)		

Table 1: Integrity Constraints in university schema

2 Answers to Question 2: Getting all data of a particular student

Let us consider all data of the student named 'Shankar'. We can use natural joins to reduce column redundancy, OR we could use joins (manually) which may result in some redundancy. Either way, we get all the data we want corresponding to the student in question.

The queries used for retrieval of this info, accompanied by the respective output tables are as follows:

Using Natural Joins:

```
SELECT * FROM(
  SELECT * FROM(
    SELECT * FROM(
      (student NATURAL JOIN department) NATURAL JOIN takes
    ) WHERE student.name = 'Shankar'
  ) AS A, advisor WHERE A.ID = advisor.s_id
) AS B, instructor WHERE B.i_ID = instructor.ID;
```

ID	name	dept_name	tot_cred	building	budget	course_id	sec_id	semester	year	grade	s_ID	i_ID	ID	name	dept_name	salary
12345	Shankar	Comp. Sci.	32	Taylor	100000	CS-101	1	Fall	2017	C	12345	10101	10101	Srinivasan	Comp. Sci.	65000
12345	Shankar	Comp. Sci.	32	Taylor	100000	CS-190	2	Spring	2017	A	12345	10101	10101	Srinivasan	Comp. Sci.	65000
12345	Shankar	Comp. Sci.	32	Taylor	100000	CS-315	1	Spring	2018	A	12345	10101	10101	Srinivasan	Comp. Sci.	65000
12345	Shankar	Comp. Sci.	32	Taylor	100000	CS-347	1	Fall	2017	A	12345	10101	10101	Srinivasan	Comp. Sci.	65000

Using Joins:

(This is how the example given in the assignment worksheet appears to have been done)

```
SELECT * FROM(
  SELECT * FROM(
    SELECT * FROM(
      SELECT * FROM(
        SELECT * FROM student WHERE student.name = 'Shankar'
      ) AS R1, department WHERE R1.dept_name = department.dept_name
    ) AS R2, takes WHERE R2.ID = takes.ID
  ) AS R3, advisor WHERE R3.ID = advisor.s_ID
) AS R4, instructor WHERE R4.i_id = instructor.ID;
```

ID	name	dept_name	tot_cred	dept_name:1	building	budget	ID:1	course_id	sec_id	semester	year	grade	s_ID	i_ID	ID	name	dept_name	salary
12345	Shankar	Comp. Sci.	32	Comp. Sci.	Taylor	100000	12345	CS-101	1	Fall	2017	C	12345	10101	10101	Srinivasan	Comp. Sci.	65000
12345	Shankar	Comp. Sci.	32	Comp. Sci.	Taylor	100000	12345	CS-190	2	Spring	2017	A	12345	10101	10101	Srinivasan	Comp. Sci.	65000
12345	Shankar	Comp. Sci.	32	Comp. Sci.	Taylor	100000	12345	CS-315	1	Spring	2018	A	12345	10101	10101	Srinivasan	Comp. Sci.	65000
12345	Shankar	Comp. Sci.	32	Comp. Sci.	Taylor	100000	12345	CS-347	1	Fall	2017	A	12345	10101	10101	Srinivasan	Comp. Sci.	65000

What we can infer from the above tables is: A student named 'Shankar' with ID = 12345 is in the Comp. Sci. department, and he has a total of 32 credits. His department is located in the 'Taylor' building and has a budget of 100000. He has taken 4 courses, CS-101, CS-190, CS-315 and CS-347. The semester/year, sec.id and grades for the same can be observed above. His advisor is an instructor named 'Srinivasan' with ID = 10101, who works in the Comp. Sci. department, and earns a salary of 65000.

3 Answers to Question 3: SQL SELECT and INSERT

Here, we will explore the SQL commands SELECT and INSERT to construct and manipulate the tables of the the university schema. Firstly, we will insert records into the tables and observe the updations.

```
-- INSERTION INTO ALL THE TABLES

SELECT * FROM classroom;
INSERT INTO classroom VALUES('Swift', '2002', 54);
SELECT * FROM classroom;

SELECT * FROM department;
INSERT INTO department VALUES('Biotechnology', 'Swift', 1000000);
SELECT * FROM department;

SELECT * FROM course;
INSERT INTO course VALUES('BT-605', 'Biomedical Imaging', 'Biotechnology', 6);
SELECT * FROM course;

SELECT * FROM instructor;
INSERT INTO instructor VALUES('10034', 'Nirmit', 'Biotechnology', 125000);
SELECT * FROM instructor;

SELECT * FROM time_slot;
INSERT INTO time_slot VALUES('E', 'M', 15, 0, 16, 20);
SELECT * FROM time_slot;

SELECT * FROM section;
INSERT INTO section VALUES('BT-605', '2', 'Fall', 2022, 'Swift', '2002', 'E');
SELECT * FROM section;

SELECT * FROM teaches;
INSERT INTO teaches VALUES('10034', 'BT-605', '2', 'Fall', 2022);
SELECT * FROM teaches;

SELECT * FROM student;
INSERT INTO student VALUES('17685', 'Rohan', 'Biotechnology', 150);
SELECT * FROM student;

SELECT * FROM takes;
INSERT INTO takes VALUES('17685', 'BT-605', '2', 'Fall', 2022, 'A+');
INSERT INTO takes VALUES('17685', 'BIO-101', '1', 'Summer', 2018, 'A+');
INSERT INTO takes VALUES('17685', 'CS-101', '1', 'Fall', 2017, 'A');
INSERT INTO takes VALUES('17685', 'PHY-101', '1', 'Fall', 2017, 'B');
INSERT INTO takes VALUES('17685', 'CS-315', '1', 'Spring', 2018, 'B+');
SELECT * FROM takes;
```

```

SELECT * FROM advisor;
INSERT INTO advisor VALUES('17685', '10034');
SELECT * FROM advisor;

SELECT * FROM prereq;
INSERT INTO prereq VALUES('BT-605', 'CS-101');
INSERT INTO prereq VALUES('BT-605', 'BIO-101');
SELECT * FROM prereq;

```

CS-347	CS-101
EE-181	PHY-101
BT-605	CS-101
BT-605	BIO-101

Now, let us explore more with the SELECT command, using different clauses, queries, and subqueries.

```

-- The comments below describe the concepts (related to SELECT) illustrated by the
→ corresponding queries!

-- Basic stuff; SELECT, NATURAL JOIN, Logical operators, ORDER BY
SELECT *
FROM (student NATURAL JOIN department)
WHERE (building = 'Taylor' AND tot_cred >= 50) OR building = 'Watson'
ORDER BY ID DESC;

-- Aggregate functions, Nested subqueries, (ORDER BY doesn't matter here)
SELECT COUNT(*), MAX(tot_cred), MIN(tot_cred), AVG(tot_cred), SUM(tot_cred)
FROM(
    SELECT *
    FROM (student NATURAL JOIN department)
    WHERE (building = 'Taylor' AND (tot_cred BETWEEN 50 AND 110))
    OR building = 'Watson'
    -- ORDER BY ID DESC
);

-- DISTINCT
SELECT DISTINCT i_id
FROM advisor;

-- String operations
SELECT *
FROM (student NATURAL JOIN takes)
WHERE (name LIKE '%s%') AND (name NOT LIKE '_h%');

-- GROUP BY, HAVING
SELECT dept_name, AVG(tot_cred)
FROM student
GROUP BY dept_name
HAVING AVG(tot_cred) > 82;

```

The output of the above queries is as follows:

ID	name	dept_name	tot_cred	building	budget
98988	Tanaka	Biology	120	Watson	90000
98765	Bourikas	Elec. Eng.	98	Taylor	85000

4 Answers to Question 4: More Queries!

4.1 (a) Which students study in x department and y building?

Let x be 'Physics' department and y be 'Watson' building. Then, the code would entail the following query:

```
SELECT ID, name
FROM (student NATURAL JOIN takes) NATURAL JOIN section
WHERE dept_name = 'Physics' AND building = 'Watson';
```

Note that we can't use the 'building' given in the 'department' table, since we need the building in which the student attends classes, and not the building corresponding to the student's dept_name. The output of the above is in the following table (next page):

ID	name
44553	Peltier
45678	Levy

4.2 (b) Which students have A grade as well as C grade?

The code and output image for this are as follows:

```
SELECT ID, name FROM (
SELECT DISTINCT A.ID
FROM(
    SELECT * FROM takes
    ) AS A, takes
WHERE A.grade = 'A' AND takes.grade = 'C' AND A.ID = takes.ID
) AS B NATURAL JOIN student;
```

ID	name
12345	Shankar

4.3 (c) Where do classes happen on Wednesday?

The code and output image for this are as follows:

```
SELECT DISTINCT building, room_number
FROM section NATURAL JOIN time_slot
WHERE day = 'W';
```

building	room_number
Painter	514
Packard	101
Taylor	3128
Watson	120
Watson	100
